Entering the Age of Attention Management

Getting ahead of the future

卡普迪姆 Nagi-ovo

10+

I have ADHD

Running 10+ agent sessions at once

...but it still wears me out.

What I've been managing

Last year

Chain of thought

Then

Context sessions agents

Now

Just tasks: what I want

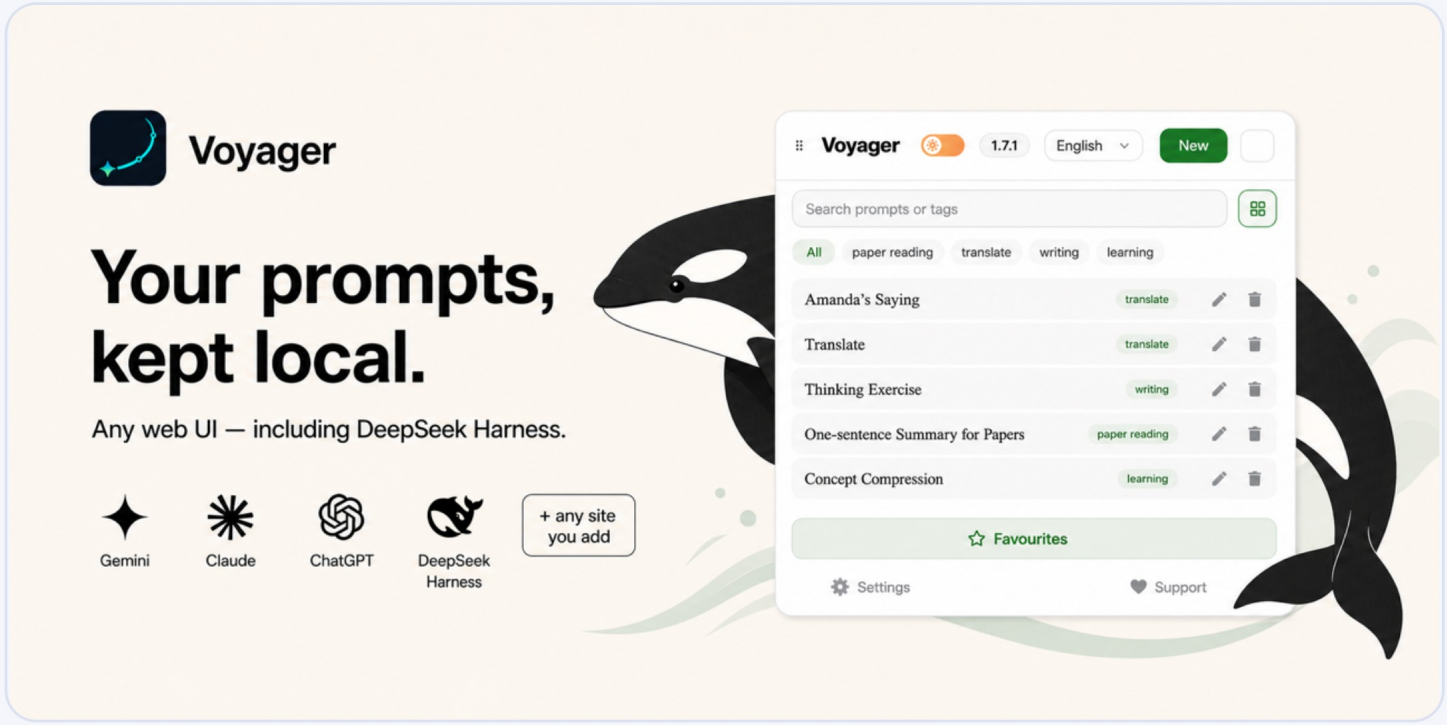

Anthropic and Cursor both ship a coordinator now: you talk only to it, and it manages the sessions.

“Increasingly, the bottleneck is human attention.”

— Anthropic · Oct 16, 2026

Earlier talks covered the agent’s context. Mine is about the context in your head.

Customize your UI, and you're customizing your attention harness

STARS 20K

It started with a timeline for Gemini

DeepSeek Harness: a great base for an attention harness

The harness everyone talks about

Helps agents work better

Tools · context · sandbox · verification

The attention harness I build

Helps people spend less attention

Attention management · the context in your head

Voyager running inside DeepSeek Harness

Three principles

01

Fewer windows

One client
One main model

02

Straight to what matters

What needs me first
No scrolling to find it

03

Clear at a glance

Seeing beats reading
before / after

01 Fewer windows

Every switch costs focus

Switching accounts

Relearning each UI

Electron apps eat RAM

Talk to one main model

Pick the best coordinator

Flash models do the legwork

No chatting with each one

For TUI fans herdrdev/herdr

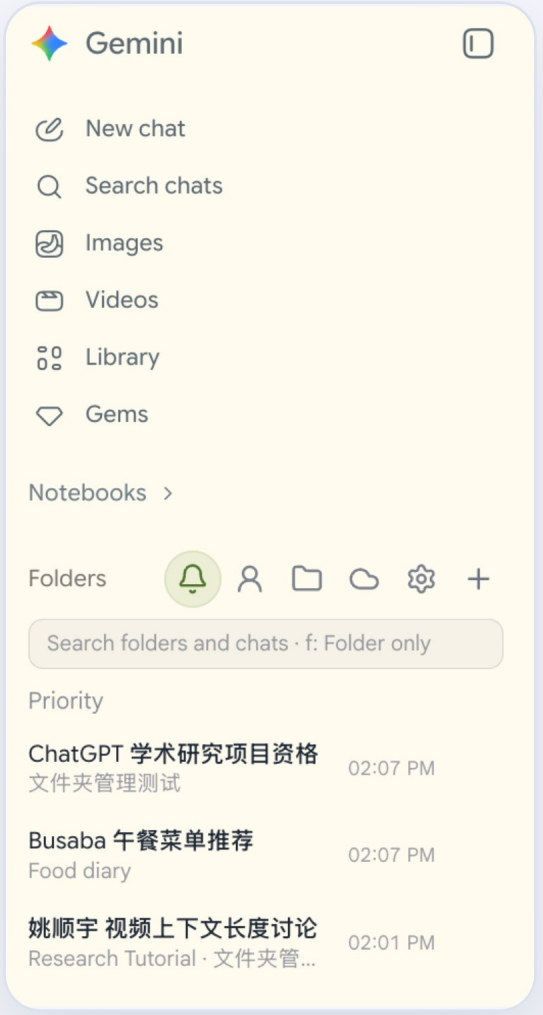

02 Straight to what matters

Folders answer: where is it?

Activity answers:
what needs me now?

Priority: active in the last 3 hours

Then today, yesterday, and so on

Voyager · Activity view

03 Clear at a glance

Some output is faster to see than to read

Artifacts in Claude Code

Visualize in Codex

Before / after, at a glance

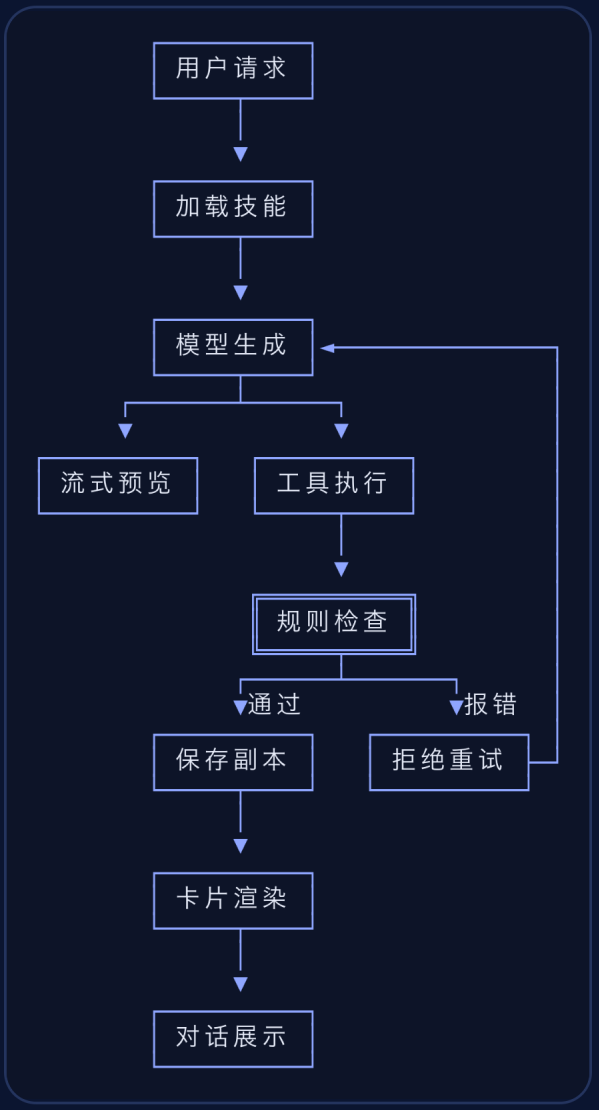

Codex Visualize: my follower growth this month

Clear at a glance, even in a terminal

Mermaid rendering + image rendering

Calm and expressive: no need to pick one

ccch1mneyyy/dsh-TUI

dsh-visualize

New this week · V4.1-Flash 1017

5 card styles

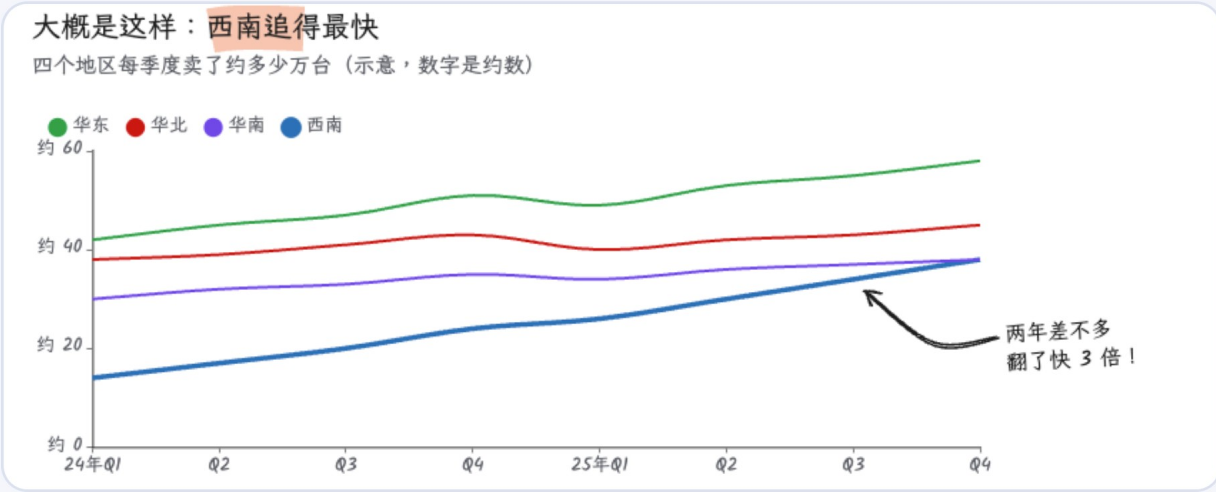

Or describe your own in style.md

Page mode

Dashboards and tools open
full size in a new tab

Pre-display check

Bad output bounces back
with an error code to fix

Hand-drawn style

What's next

Main session

Orchestrate

→

A few helper sessions

Build + test

→

Me

Review the visuals

Further out

Speak, and smart UIs appear as holograms

What I'll do next

Research visual UI on DeepSeek Harness, then open-source it

卡普迪姆

Season 2 onward: hands-on with DeepSeek Harness

01 Fewer windows

02 Straight to what matters

03 Clear at a glance

Getting ahead of the future

Spend the bandwidth you save on rest, thinking, exercise, and the people you love.

Thank you!
